

Objective

Detail-oriented Computer Science graduate with strong skills in SQL, Excel, Python, and AI/ML engineering. Experienced in building machine learning models, NLP systems, and AI-powered applications. Seeking a role to apply analytical thinking, deep learning expertise, and data visualization abilities to drive business decisions and develop intelligent solutions.

Skills

Programming & Data

Python (Pandas, NumPy, SciPy, Matplotlib)
SQL (MySQL, PostgreSQL)

Cloud & BI

Google Cloud (Big Query)
AWS

AI / Machine Learning

PyTorch
Scikit-learn / XGBoost / LightGBM

Deep Learning & MLOps

CNN, RNN, LSTM, Transformers
MLflow / Docker / FastAPI
Prompt Engineering / RAG / Fine-tuning
OpenAI Api/Anthropic API

Projects

EQAP (Equinox Quantitative Analytics and Predictive Platform) 2025–2026

Tools: Python, XGBoost, pandas, scikit-learn, NumPy, Finnhub API, DistilBERT, React JS, Material-UI, Recharts, MLflow

- Built an end-to-end quantitative analytics platform that ingests multi-ticker OHLCV data across daily, hourly, and minute intervals, engineers 200+ features through a strictly ordered pipeline, and trains an XGBoost classifier on 5 years of historical data (2018–2023) to generate actionable trading signals.
- Engineered features including RSI, MACD, Bollinger Bands, and moving averages, with a dedicated DataQualityMetrics and FeatureValidationConfig layer enforcing data integrity checks before model training.
- Achieved strong classification performance with XGBoost using class-balancing and time-based train/test splitting to prevent lookahead bias across 10+ major tickers (AAPL, GOOGL, MSFT, etc.).
- Integrated a Finnhub news-fetching module and DistilBERT-based sentiment pipeline to produce sentiment features that feed into the main feature engineering pipeline.
- Designed a modular, test-driven architecture (203 nodes, 265 edges across 21 code communities) with 100% test coverage spanning unit, integration, and performance tests; React 18 + TypeScript front-end with Recharts and Material-UI in development for Q3 2026.

AI Customer Support Chatbot with API Integration 2026

Tools: Python, LangChain, OpenAI API, FastAPI, React

- Developed a full-stack AI chatbot using LangChain and OpenAI GPT API capable of handling multi-turn conversations with contextual memory.
- Built a REST API backend with FastAPI to expose chatbot endpoints, enabling integration with any front-end or third-party service.
- Implemented Retrieval-Augmented Generation (RAG) to ground responses in a custom knowledge base, reducing hallucinations significantly.
- Designed a React-based chat interface with real-time streaming responses and conversation history management.
- Deployed the application on Azure with Docker containerization, achieving sub-200ms average response latency.

Education

BACHELOR OF SCIENCE IN COMPUTER SCIENCE [Quaid-e-Azam University] — [Islamabad]

Graduation: 2026

Major: Computer Science
